## ABOUT ME

A highly motivated Full Stack Web Developer with 3 years of professional experience in a software house. Skilled in designing and developing scalable, efficient, and user-friendly web applications with expertise across both backend and frontend development. Strong foundation in database design, API integration, and agile methodologies. Holds a BSc (Hons) in Computing (Information Systems) from the University of Greenwich, UK, with additional qualifications from the Scottish Qualifications Authority.

---

## EDUCATION

### Higher National Diploma (HND) in Computing

2019 - 2021

Scottish Qualifications  
Authority, UK

- Built a solid foundation in programming, software engineering principles, networking, and IT systems management.
- Gained hands-on experience with Java, PHP, and database-driven applications, reinforcing practical development skills.
- Strengthened knowledge of object-oriented programming, algorithms, and data structures.
- Contributed to collaborative assignments that simulated real-world IT projects in a team environment.

### BSc (Hons) Computing (Information Systems)

2019 - 2022

University of Greenwich, UK

- Gained strong knowledge in software development, database design, web technologies, and system analysis.
  - Completed projects involving full-stack development, RESTful APIs, and cloud-based applications, applying both theoretical and practical skills.
  - Developed problem-solving, research, and teamwork abilities through coursework and group projects.
  - Final year project focused on designing a scalable web-based system, integrating backend and frontend technologies.
-

# WORK EXPERIENCE

## Full Stack Developer

SoftGuide Software House

2022 - Present

- Developed and maintained dynamic web applications using PHP, Java, Spring, Next JS, TypeScript and Laravel, ensuring scalability and performance.
  - Designed and optimized database structures to improve efficiency and reduce query response times.
  - Collaborated with frontend teams to implement Vue.js and React components, enhancing user interfaces and responsiveness.
  - Integrated third-party APIs to expand application functionality and improve user experience.
  - Participated in Agile/Scrum development, contributing to sprint planning, code reviews, and feature delivery.
- 

# PROJECTS

## Kenja Cloud - School Management Support System

- Contributed to the development and integration of Kenja Cloud, a cloud-based school management system derived from over 20 years of Sundai Group's expertise in school operations.
  - Supported system deployment used by 800+ schools across Japan, including public and private institutions as well as local governments.
  - Implemented features for student information management, attendance tracking, grade processing, report generation, and health record management.
  - Worked on certificate issuance, graduation/promotion workflows, and class organization modules to improve administrative efficiency.
  - Enhanced system usability with intuitive UI components and optimized backend workflows for scalability and performance.
  - Collaborated on integration with parent communication tools, enabling secure and seamless school-parent interactions.
  - Participated in continuous improvement through feature updates, report customization, and cloud optimization, reducing implementation and maintenance costs compared to traditional systems.
- 

## Hotel Booking System

- Designed and implemented a comprehensive hotel management system to streamline reservation, check-in/check-out, and billing processes.
- Built room booking module with availability tracking, date validation, and conflict-free reservations.
- Developed customer management module for storing guest profiles, history, and preferences.

- Integrated billing and invoicing system with automated tax/discount calculation and digital receipts.
  - Implemented role-based access control for administrators, staff, and receptionists to ensure secure operations.
  - Added report generation for occupancy, revenue, and customer insights to support management decisions.
  - Optimized database structure for fast queries and reduced redundancy using relational database design.
- 

## **ESS Educational Support System**

- Developed problem (question) creation tools enabling instructors to generate, edit, and manage question pools for practice and examinations.
  - Built CBT-style testing module, supporting both practice exams and formal assessments with online test delivery.
  - Designed and implemented grade management & analysis functions, allowing tracking of student performance, identification of weak areas, and generating reports for instructors.
  - Worked on certificate issuance, graduation/promotion workflows, and class organization modules to improve administrative efficiency.
  - Included exam management tools: test scheduling, paper-print preparation, formatting, etc., to assist teachers in both digital and print versions.
  - Ensured system content stays current: updates to reflect legal/regulation changes, content review to match current national examination standards.
  - Supported and maintained using cloud infrastructure (AWS) to ensure reliability, scalability, and security.
- 

## **SKILLS**

- Programming & Frameworks: PHP, Laravel, Java, Spring, JSP, Hibernate, React.js, Next JS and TypeScript
  - Frontend Development: HTML5, CSS3, Tailwind CSS, Responsive UI/UX Design
  - Backend Development: RESTful APIs, JSON, Database Design & Optimization
  - Tools & Technologies: Git/GitHub, Docker, Agile & Scrum methodologies
  - Languages: English (Intermediate), Japanese (JLPT N3 - Study)
-
